## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kakimoto et al (U.S. 4,809,960) in view of Figure 1 (Prior Art) of the present invention.

Kakimoto et al discloses a suspension assembly of a heavy-duty vehicle axle/suspension system, the assembly having a beam, said beam (upper control arm, see column 2, lines 55-56) including a bushing assembly (1) for pivotally mounting the beam on a vehicle frame via a frame hanger (21), wherein the improvement comprises: means for substantially preventing (see figure 2) relative movement of at least one spacer disk (4) disposed between the bushing assembly (1) and the frame hanger (21), wherein the spacer disk (4) generally being prevented from movement relative to the bushing assembly (1), whereby excessive wear to the spacer disk (4) moving relative to the frame hanger (21) generally is prevented.

Kakimoto et al discloses every element of the invention as discussed above except that the spacer apparatus is formed of generally rigid polymer; wherein the generally rigid polymer is an ultra-high molecular weight polyethylene.

Figure 1 (Prior Art) of the present invention teaches the spacer apparatus (28) is formed in one piece of ultra-high molecular weight polyethylene in order to prevent

Art Unit: 3616

rattling noises from being cause by contact between the bushing and the vehicle bracket.

It would have been obvious design choice for one having ordinary skill in the art at the time the invention was made to modify bushing system of Japan Publication (JP-11210794) as taught by Figure 1 (Prior Art) of the present invention to include the spacer apparatus is formed in one piece of ultra-high molecular weight polyethylene in order to prevent rattling noises from being cause by contact between the bushing and the vehicle bracket.

### ***Response to Arguments***

3. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

### ***Allowable Subject Matter***

4. Claim 2-3 and 11-13 are allowed.

### ***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 3616

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
